

# Meditab's ParadigmSHIFT™

## A Decision Support System Designed Specifically for IPAs, MCOs and MSOs by experts from these organizations

### ►► Introduction

**How many times have you heard:** healthcare organizations need to drive down healthcare costs and improve the quality of care?

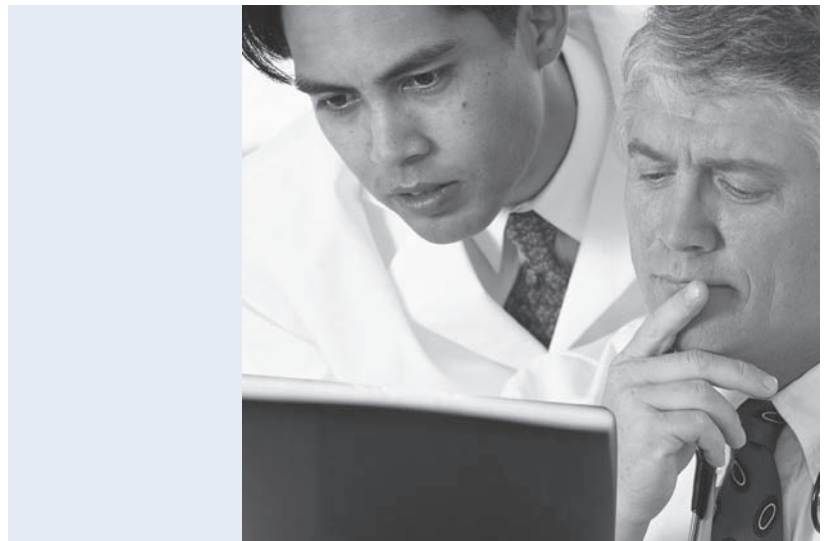

Healthcare insurers realize this **is a daunting task**; that is why they have established bonuses and incentives for IPAs and MCOs if certain levels are achieved related to cost cutting and increasing the quality of care indicators for their managed populations. Also, providers need to be able to reach out to their patients beyond the walls of their practice without hiring additional staff.

**What IPAs and MCOs need today** is an information system that will help them reap the benefits of these bonuses and incentives without adding staff.

**Meditab's ParadigmSHIFT™ (PShift) is this system!**

PShift provides a combination of software solutions and services designed to help IPAs and MCOs:

Meet the targets defined in the Management Services Agreement (MSA) to achieve incentives from the insurer(s) and meet the organization's mission.

### ►► BRAND versus GENERIC prescription incentives:

- Addresses the “points of failure” during the workflow process
- Creates a knowledge database and reports.
- Delivers proprietary software (GenRX™) to assist in generic prescription generation at the POS.
- Provides a Messaging Service to proactively contact the RX eligibility service organization.
- Delivers a Messaging Service for patients, describing the benefits of the program.
- Provides a Healthcare Portal to increase the communications between: Patients – Providers - Pharmacies.

Meditab's Intelligent Medical Software (IMS),  
Version 2007, Release 1/1/07, has received  
CCHIT Product Certification.

**MEDITAB**

Improving the business and delivery of healthcare

## ▶▶ Quality Indicators

### (Incentives relative to preventative medicine and health maintenance)
